CUSTOM DESIGN

■ We can offer you an unrivalled design and custom projects service. Our team of architects, designers and technicians can integrate and digitalise your projects through our screens, creating furnishing elements that blend in with the surrounding environment.

Our LAB is where we transform your ideas into #beyondimaginable custom solutions by creating screens with unconventional shapes and developments, making the most of the modularity of the products.

Sharp 90° corners, concave and convex curvatures or digital displays with the best finishes to enhance your products, the limit is your imagination.

CUBES & COLUMNS

■ Our LED Cubes & Columns are a system composed of screens installed as a covering of a structure designed and handcrafted by our designers.

They are just one of the many solutions in terms of size and shape, taking advantage of both the modularity of the LED screens and the sharp 90° angle, the flagship of our LAB's design, for a #beyondimaginable viewing experience.

The customisable finishes (lacquered, mirrored, satin, glossy, matt, etc.) make the LED Cubes perfectly integrated with the surrounding design and furnishings.

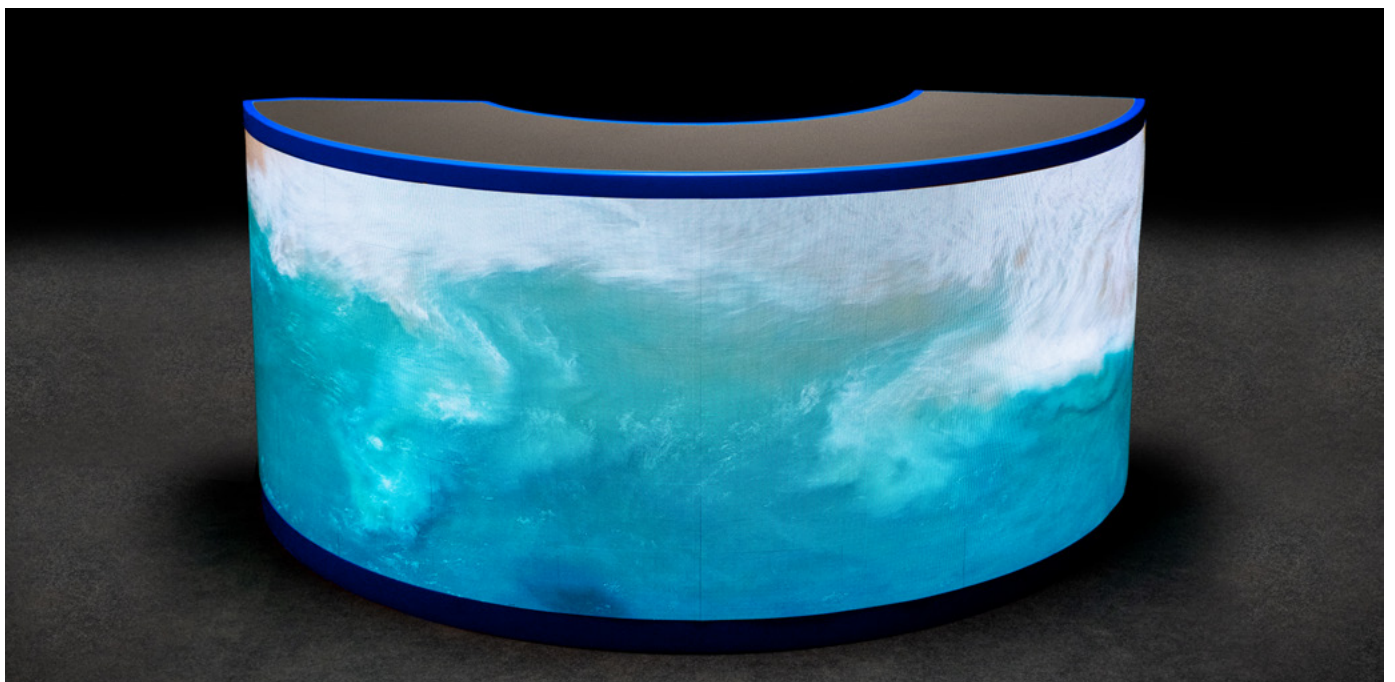

CYLINDERS & DESKS

Our LED Cylinders & Desks are real pieces of design that will amaze your customers and further enhance your product.

Modular with flexible modules to obtain sinuous and unexpected shapes. Perfect visual rendering with both concave and convex, horizontal and vertical curvature.

Full customisation is achievable thanks to our planners and designers with whom we design and build custom screens for the customer.

The customisable finishes (lacquered, mirrored, satin, glossy, matt, etc.) make our products perfectly integrated with the surrounding design and furnishings. Full front maintenance with rapid magnetic attachment system of the modules.
